Privacy Enhanced Gateway version 3.3.15 Release Notes

Review the new features and fixes available in this release.

Release Date: 29-May-2023

For information related to features and fixes in previous Privacy Enhanced Gateway releases, see the PDFs for these releases: Process Discovery documentation (release versions).

What's new
View real-time redaction results   Real-time redaction enables users to test out different redaction settings on the same set of data and immediately view the results without permanently changing the redaction settings. After the user determines the ideal redaction settings, they can commit the changes to the system, as well as export the new settings.   Review redaction results
Delete images in bulk using the PEG interface   Users can free up PEG storage space by generating a list of images that meet a specific criteria, then selecting the images for deletion.   Using Bulk delete
Generate new redaction results after updating word lists   Apply updated word lists to images that have already been redacted but were not forwarded to the Process Discovery platform using the **Run re-redaction sync job** feature.   Review redaction results
