## Process Discovery v.1.81.0 release notes

Review what's changed, fixes, and limitations in Process Discovery for the v.1.81.0 release.

Release Date: 22-February-2024

For information related to features and fixes in previous Process Discovery releases, see the PDFs for these releases: [Process Discovery documentation \(release versions\)](#).

### Fixes

The tooltip for the copy observer icon displays the observer name accurately, as expected. Previously, the observer id displayed instead of the name.

Users will see all event data for variations of the user name. Previously, when the user name had two different cases (upper and lower case) for one user, only the lower case name displayed events and cycles.

The **Instances Viewer** and **Screen Signature** pages can be used for environments with large volumes of recorded events. Previously when power users opened one of these in this scenario, the page would timeout.

**Service Cloud case ID:** 02099610
